

FARHAN ALWANDA

FULLSTACK AND AI ENGINEER

+62 8978648072

RAJA.FARHAN.ALWANDA@GMAIL.COM

CIKARANG, JAWA BARAT

PROFILE

System Engineer with 1 year more of experience in developing and integrating end-to-end digital systems. Experienced in backend development using Go (Gin, GORM), PHP (Laravel), and Python (FastAPI), as well as cross-platform mobile development using Dart (Flutter). Hands-on experience integrating AI models with IoT devices (ESP32, Raspberry Pi) for automation and sensor data processing. Skilled in building responsive web interfaces using Vue.js, Alpine.js, and Tailwind CSS. Strong understanding of RESTful APIs, database design, system integration, and scalable application development.

SKILLS & ABILITIES

1. Technical Skills

- **Full-Stack Development:** Go (Gin/GORM), PHP (Laravel/filament), Python (FastAPI), Dart (Flutter)
- **Frontend & UI/UX:** Vue, Nuxt, Alpine.js, Tailwind CSS, Bootstrap, AJAX.
- **IoT & AI Integration:** ESP32, Raspberry Pi, Arduino, AI-driven Sensor Processing, MQTT.
- **Databases & Tools:** PostgreSQL, MySQL, MongoDB, Git, Linux, Miniconda.

2. Core Abilities

- **Integrated System Architecture:** Designing a digital ecosystem from hardware to the cloud.
- **Data Analysis:** Technical data processing using Python (Pandas/NumPy), SQL, and Tableau.
- **Technical Communication:** Effective system documentation and technical presentations.

EXPERIENCE

Jan2026 – present

Fullstack Developer at Oneject Indonesia

- **Catera (Catering Tap Entry & Record Access):** Developed an IoT-based meal quota management system (ESP32 & RFID) and Node-RED, integrating smart data processing for automated employee verification and real-time database synchronization.
- **IT-Framework CMS (Portal Project):** Designing a centralized portal architecture using Laravel & Filament with centralized authentication and dynamic access permission mapping to integrate various internal systems into a single secure ecosystem.

Apr 2025 – Dec 2025

Fullstack Developer at Sinar Meadow International Indonesia

- **Internal Financial Management System:** Developed a budget management application for over 100 users using Laravel and Alpine.js,

integrating an automated fund tracking module and AJAX-based interdepartmental loan features to optimize financial workflows.

- **Sales Portfolio CMS:** Developed a custom CMS using Laravel Filament (TALL Stack) and Tailwind CSS to digitize the company's product portfolio with a modern, mobile-first design to expand its digital marketing reach.
- **Automated Stock Monitoring System:** Designing an automated stock monitoring system based on Laravel Jobs & Mail that detects critical thresholds in real time and sends inventory reports via email in Excel format for warehouse data accuracy.
- **Warehouse Requisition & Approval System:** An end-to-end goods requisition system with a dynamic multi-level approval flow, equipped with audit log and PDF report generator features to improve transparency and speed of warehouse administration processes.

Sep 2024 – Dec 2024

Aftersales IT-system
at SGMW Motor Indonesia

- **Advanced Data Management:** Conduct daily audits and reconciliations of supplier and dealer data (1,000+ rows) using complex Excel functions to ensure data integrity and accuracy without missing values.

EDUCATION

2022 - 2026

Bachelor of Computer Science
at President University

- had a GPA of 3.70/4.00 and received a 75% Academic Scholarship during studies.
- **Undergraduate Thesis (Sortify):** Designing and implementing an IoT and AI-based automatic waste bin system capable of classifying and sorting waste in real-time using smart sensor integration and machine learning models.

Feb 2026 - Jul 2026

AI Engineer Cohort
at Pijak Program

- Selected participants in the intensive digital talent development program by **dicoding x IBM SkillsBuild** focusing on AI Engineering delve into the implementation of artificial intelligence models for real-world industrial solutions.
- Developing an intelligent recruitment platform architecture using FastAPI (Python) and Vue 3 as my final project. the platform integrated by Bi-Encoder (fine-tuned) to automate bulk CV ranking for HR based on a 3-component evaluation formula, while also providing a vector-based semantic search feature for job seekers to find relevant job openings by uploading their CVs based on data that has been scraped using the existing scraping feature

LANGUAGES

Indonesian (Native), English (Professional Working Proficiency), Arabic (Professional Working Proficiency).
